

# IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

## Eagle Lakes Lead and Copper Tap Sampling Monitoring Public Notice

### What happened?

Our water system did not meet the requirements of a drinking water rule. Although this is not an emergency, as our customers, you have a right to know what happened, what you should do, and what we are doing to correct this situation.

We are required to monitor your drinking water for specific contaminants on a regular basis. Our system is required to conduct monitoring for Lead and Copper Tap Sampling. Results of regular monitoring are an indicator of whether or not your drinking water meets health standards. During the January - June 2019 compliance period, we did not monitor or test for Lead and Copper, and therefore cannot be sure of the quality of your drinking water at that time.

### What should I do?

*Infants and children who drink water containing lead in excess of the MCL could experience delays in their physical or mental development. Children could show slight deficits in attention span and learning abilities. Adults who drink this water over many years could develop kidney problems or high blood pressure.*

*Copper is an essential nutrient, but some people who drink water containing copper in excess of the action level over a relatively short amount of time could experience gastrointestinal distress. Some people who drink water containing copper in excess of the action level over many years could suffer liver or kidney damage. People with Wilson's Disease should consult their personal doctor.*

*Any customers who are concerned about their exposure to Lead can choose alternative sources of water for ingestion.*

### What does this mean?

This is not an immediate risk. If it had been, you would have been notified immediately.

### What is being done?

This is what we are doing to correct the problem: We have performed our biannually sampling as of 7/29/19. Once the results are received, we will submit them to the Department as required.

We anticipate resolving the problem by this date: 9/1/2019

For more information, please contact Raymond Pānas at 386-313-4133

*Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools and businesses.) You can do this by posting this notice in a public place or distributing copies by hand or mail.*
